Montana Board of Oil and Gas Conservation Environmental Assessment

Operator: KeeSun Corporation
Well Name/Number: Walberger 1-29
Location: NE NE Section 29 T33N R4W
County: Toole MT; Field (or Wildcat) Wildcat
Air Quality
(possible concerns)
Long drilling time: No, 3 to 4 days drilling time.
Unusually deep drilling (high horsepower rig): No, small single derrick drilling rig, about
500 HP (Estimated) to drill to 2900' TD.
Possible H2S gas production: No H2S anticipated.
In/near Class I air quality area: No not in a Class I air quality area.
Air quality permit for flaring/venting (if productive): Yes, DEQ air quality permit required
<u>under 75-2-211.</u>
Mitigation:
_X Air quality permit (AQB review)
Gas plants/pipelines available for sour gas
Special equipment/procedures requirements Other:
Comments: No special concerns – using small rig to drill to 2900' TD.
Commente. The openial conforms — doing amailing to amilite 2000 12.
Water Quality
(possible concerns)
(possible concerns) Salt/oil based mud: No, freshwater, freshwater mud system, air, air mist.
(possible concerns) Salt/oil based mud: No, freshwater, freshwater mud system, air, air mist. High water table: No high water table anticipated.
(possible concerns) Salt/oil based mud: No, freshwater, freshwater mud system, air, air mist. High water table: No high water table anticipated. Surface drainage leads to live water: No, closest drainage is an unnamed ephemeral
(possible concerns) Salt/oil based mud: No, freshwater, freshwater mud system, air, air mist. High water table: No high water table anticipated. Surface drainage leads to live water: No, closest drainage is an unnamed ephemeral drainage, about 1/1 6 of a mile to the north from this location.
(possible concerns) Salt/oil based mud: No, freshwater, freshwater mud system, air, air mist. High water table: No high water table anticipated. Surface drainage leads to live water: No, closest drainage is an unnamed ephemeral drainage, about 1/1 6 of a mile to the north from this location. Water well contamination: No, closest water wells are 1 mile or further in any direction
(possible concerns) Salt/oil based mud: No, freshwater, freshwater mud system, air, air mist. High water table: No high water table anticipated. Surface drainage leads to live water: No, closest drainage is an unnamed ephemeral drainage, about 1/1 6 of a mile to the north from this location.
(possible concerns) Salt/oil based mud: No, freshwater, freshwater mud system, air, air mist. High water table: No high water table anticipated. Surface drainage leads to live water: No, closest drainage is an unnamed ephemeral drainage, about 1/1 6 of a mile to the north from this location. Water well contamination: No, closest water wells are 1 mile or further in any direction from this location. Surface hole in this well will be drilled to 300' with freshwater and/or air. Steel surface casing will be run and cemented to surface to protect ground water if any.
(possible concerns) Salt/oil based mud: No, freshwater, freshwater mud system, air, air mist. High water table: No high water table anticipated. Surface drainage leads to live water: No, closest drainage is an unnamed ephemeral drainage, about 1/1 6 of a mile to the north from this location. Water well contamination: No, closest water wells are 1 mile or further in any direction from this location. Surface hole in this well will be drilled to 300' with freshwater and/or air. Steel surface casing will be run and cemented to surface to protect ground water if any. Porous/permeable soils: No, sandy silty bentonitic soils.
(possible concerns) Salt/oil based mud: No, freshwater, freshwater mud system, air, air mist. High water table: No high water table anticipated. Surface drainage leads to live water: No, closest drainage is an unnamed ephemeral drainage, about 1/1 6 of a mile to the north from this location. Water well contamination: No, closest water wells are 1 mile or further in any direction from this location. Surface hole in this well will be drilled to 300' with freshwater and/or air. Steel surface casing will be run and cemented to surface to protect ground water if any. Porous/permeable soils: No, sandy silty bentonitic soils. Class I stream drainage: No Class I stream drainages.
(possible concerns) Salt/oil based mud: No, freshwater, freshwater mud system, air, air mist. High water table: No high water table anticipated. Surface drainage leads to live water: No, closest drainage is an unnamed ephemeral drainage, about 1/1 6 of a mile to the north from this location. Water well contamination: No, closest water wells are 1 mile or further in any direction from this location. Surface hole in this well will be drilled to 300' with freshwater and/or air. Steel surface casing will be run and cemented to surface to protect ground water if any. Porous/permeable soils: No, sandy silty bentonitic soils. Class I stream drainage: No Class I stream drainages. Mitigation:
(possible concerns) Salt/oil based mud: No, freshwater, freshwater mud system, air, air mist. High water table: No high water table anticipated. Surface drainage leads to live water: No, closest drainage is an unnamed ephemeral drainage, about 1/1 6 of a mile to the north from this location. Water well contamination: No, closest water wells are 1 mile or further in any direction from this location. Surface hole in this well will be drilled to 300' with freshwater and/or air. Steel surface casing will be run and cemented to surface to protect ground water if any. Porous/permeable soils: No, sandy silty bentonitic soils. Class I stream drainage: No Class I stream drainages. Mitigation: Lined reserve pit
(possible concerns) Salt/oil based mud: No, freshwater, freshwater mud system, air, air mist. High water table: No high water table anticipated. Surface drainage leads to live water: No, closest drainage is an unnamed ephemeral drainage, about 1/1 6 of a mile to the north from this location. Water well contamination: No, closest water wells are 1 mile or further in any direction from this location. Surface hole in this well will be drilled to 300' with freshwater and/or air. Steel surface casing will be run and cemented to surface to protect ground water if any. Porous/permeable soils: No, sandy silty bentonitic soils. Class I stream drainage: No Class I stream drainages. Mitigation: Lined reserve pit X Adequate surface casing
(possible concerns) Salt/oil based mud: No, freshwater, freshwater mud system, air, air mist. High water table: No high water table anticipated. Surface drainage leads to live water: No, closest drainage is an unnamed ephemeral drainage, about 1/1 6 of a mile to the north from this location. Water well contamination: No, closest water wells are 1 mile or further in any direction from this location. Surface hole in this well will be drilled to 300' with freshwater and/or air. Steel surface casing will be run and cemented to surface to protect ground water if any. Porous/permeable soils: No, sandy silty bentonitic soils. Class I stream drainage: No Class I stream drainages. Mitigation: Lined reserve pitX_Adequate surface casing Berms/dykes, re-routed drainage
(possible concerns) Salt/oil based mud: No, freshwater, freshwater mud system, air, air mist. High water table: No high water table anticipated. Surface drainage leads to live water: No, closest drainage is an unnamed ephemeral drainage, about 1/1 6 of a mile to the north from this location. Water well contamination: No, closest water wells are 1 mile or further in any direction from this location. Surface hole in this well will be drilled to 300' with freshwater and/or air. Steel surface casing will be run and cemented to surface to protect ground water if any. Porous/permeable soils: No, sandy silty bentonitic soils. Class I stream drainage: No Class I stream drainages. Mitigation: Lined reserve pitX_Adequate surface casing Berms/dykes, re-routed drainage Closed mud system
(possible concerns) Salt/oil based mud: No, freshwater, freshwater mud system, air, air mist. High water table: No high water table anticipated. Surface drainage leads to live water: No, closest drainage is an unnamed ephemeral drainage, about 1/1 6 of a mile to the north from this location. Water well contamination: No, closest water wells are 1 mile or further in any direction from this location. Surface hole in this well will be drilled to 300' with freshwater and/or air. Steel surface casing will be run and cemented to surface to protect ground water if any. Porous/permeable soils: No, sandy silty bentonitic soils. Class I stream drainage: No Class I stream drainages. Mitigation: Lined reserve pit Adequate surface casing Berms/dykes, re-routed drainage Closed mud system Off-site disposal of solids/liquids (in approved facility)
(possible concerns) Salt/oil based mud: _No, freshwater, freshwater mud system, air, air mist. High water table: _No high water table anticipated. Surface drainage leads to live water: _No, closest drainage is an unnamed ephemeral drainage, about 1/1 6 of a mile to the north from this location. Water well contamination: _No, closest water wells are 1 mile or further in any direction from this location. Surface hole in this well will be drilled to 300' with freshwater and/or air. Steel surface casing will be run and cemented to surface to protect ground water if any. Porous/permeable soils: _No, sandy silty bentonitic soils. Class I stream drainage: _No Class I stream drainages. Mitigation: Lined reserve pitX_Adequate surface casing Berms/dykes, re-routed drainage Closed mud system Off-site disposal of solids/liquids (in approved facility) Other:
(possible concerns) Salt/oil based mud: No, freshwater, freshwater mud system, air, air mist. High water table: No high water table anticipated. Surface drainage leads to live water: No, closest drainage is an unnamed ephemeral drainage, about 1/1 6 of a mile to the north from this location. Water well contamination: No, closest water wells are 1 mile or further in any direction from this location. Surface hole in this well will be drilled to 300' with freshwater and/or air. Class I stream drainage: No Class I stream drainages. Mitigation: Lined reserve pit Adequate surface casing Berms/dykes, re-routed drainage Closed mud system Off-site disposal of solids/liquids (in approved facility)

Soils/Vegetation/Land Use

(possible concerns)

Steam crossings: No, stream crossings anticipated. Crossing only ephemeral
drainages.
High erosion potential: No, small cut, up to 4.9' and small fill, up to 4.1', required.
Loss of soil productivity: No, location will be restored after drilling, if nonproductive. If
productive unused portion of drillsite will be reclaimed.
Unusually large wellsite: No, 200'X200' location size required. Damage to improvements: Slight, surface use is a CRP field.
Conflict with existing land use/values: <u>Slight</u>
Mitigation
Avoid improvements (topographic tolerance)
Exception location requested
X Stockpile topsoil
Stream Crossing Permit (other agency review)
X Reclaim unused part of wellsite if productive
Special construction methods to enhance reclamation
Other
Comments: Access will be over existing county gravel road, Ethridge Road. About
1.5 miles of new access will be built into this location from the existing county road.
Cuttings will be buried in and unlined earthen pit. Drilling fluids if used will be allowed to
dry in the pit. Pits will be backfilled after drying. No special concerns.
Health Hazards/Noise
nealth nazarus/Noise
(possible concerns)
Proximity to public facilities/residences: No residences within 1 mile from this location.
The town of Ethridge, Montana is about 3 miles to the southeast from this location.
Possibility of H2S: No H2S anticipated.
Size of rig/length of drilling time: Small drilling rig/short 3 to 4 days drilling time.
Mitigation:
_X Proper BOP equipment
Topographic sound barriers
H2S contingency and/or evacuation plan
Special equipment/procedures requirements
Other:
Comments: Adequate surface casing and operational BOP should mitigate any
problems. No concerns
Wildlife/recreation
(possible concerns)
Proximity to sensitive wildlife areas (DFWP identified): None identified.
Proximity to recreation sites: None identified.
Creation of new access to wildlife habitat: No
Conflict with game range/refuge management: No
Threatened or endangered Species: Only species identified as threatened or
endangered is the Black-footed Ferret. Candidate species listed is the Sprague's Pipit.
Proposed species is the Mountain Plover. NH tracker website lists only species of
concern as the Ferruginous Hawk.
Mitigation:
Avoidance (topographic tolerance/exception)
Other agency review (DFWP, federal agencies, DSL)

Screening/fencing of pits, drillsite Other:
Comments: Private surface CRP land. No concerns
Historical/Cultural/Paleontological
(possible concerns) Proximity to known sites: None identified
Mitigation
avoidance (topographic tolerance, location exception)
other agency review (SHPO, DSL, federal agencies)
Other: Comments: <u>Private surface CRP lands. No concerns.</u>
Social/Economic
(possible concerns) Substantial effect on tax base
Substantial effect of tax base Create demand for new governmental services
Population increase or relocation
Comments: No concerns.
Remarks or Special Concerns for this site
Well is a 2900' Rierdon Formation test.
